

PAMMI SAMPATH

Vijayawada, India · sampathpammi88@gmail.com · github.com/SAM-THE-DEVOPS · linkedin.com/in/sampath-vishwakarma

DevOps Engineer | DevOps Intern | Cloud & DevOps Fresher

PROFILE

B.Tech Computer Science student with a strong interest in DevOps, building practical skills in Linux, Python, Git/GitHub, Docker, and CI/CD fundamentals. Familiar with cloud and infrastructure concepts through AWS, Terraform, and Kubernetes as part of an active, hands-on learning roadmap. Experienced in scripting automation and building command-line tools, with a growing focus on infrastructure and deployment workflows. Eager to apply and expand these skills as a DevOps fresher in a real-world engineering environment.

TECHNICAL SKILLS

Programming: Python

DevOps: Linux, Git, GitHub, Docker, CI/CD, GitHub Actions

Cloud: AWS (fundamentals)

Infrastructure as Code: Terraform (fundamentals)

Container Orchestration: Kubernetes (fundamentals)

Networking & Infrastructure: Networking fundamentals, AWS VPC, IAM, cloud infrastructure concepts

Other: REST APIs, Python scripting, VS Code, VirtualBox

EDUCATION

Loyola Institute of Technology and Management

B.Tech, Computer Science and Engineering (R23) — Semester 4-1 | 2023 – 2027

PROJECTS

Local DevOps Command Center — github.com/SAM-THE-DEVOPS/Local-DevOps-Command-Center

- Developed a Python-based local DevOps command center to centralize and automate common system and DevOps operations through a unified interface.
- Integrated system-level utilities and DevOps workflows to simplify tasks such as environment inspection, service management, and operational status checks.
- Designed the project with a modular architecture to make individual tools and automation workflows reusable, maintainable, and easy to extend.

Multi-threaded File Search Engine —

github.com/SAM-THE-DEVOPS/Multi-threaded-File-Search-Engine

- Built a Python-based file search tool using multithreading to search across directories concurrently, improving search speed over a single-threaded approach.
- Applied file-system traversal and concurrency concepts to handle multiple search operations in parallel, reinforcing core Linux/OS fundamentals relevant to DevOps tooling.

URL Status Checker — github.com/SAM-THE-DEVOPS/url-checker

- Developed a Python utility that sends HTTP requests to a list of URLs and reports their reachability and status codes.

- Implemented error handling for timeouts and failed requests, automating a task commonly used in uptime monitoring and DevOps health checks.

CERTIFICATIONS

- [Claude Code in Action](#) — Anthropic
- Python Essentials 1 — Cisco Networking Academy (Completed 12 Feb 2026)
